- Allows observers to track and discover scientific products enabled by their contributions
- Consistent data format (DarwinCore), existing dynamic DOIs, and tracking workflows on GBIF enables integration for:
 - iNaturalist (23k)
 - eBird (700k)
 - Artportalen (70k)
 - And others...

Current Progress

- Developed workflow for iNaturalist observations, working on identifications workflow
- Working on hosting and storage capacity

Future Directions

- Expansion to environmental data
- Integration with Anecdotal
- Tracking by location
