

Identifying Vulnerable Facilities (Hospitals, Power Plants, Airports) Due to Extreme Weather Effects (Precipitation, High Wind, Landslides)

Vulnerable Facilities

Extreme Weather Events

Hospital Data:

- Data Gathered from Homeland Infrastructure Foundation Level Data (HIFLD)

Precipitation

Data:

- NASA Global Precipitation Mission (GPM)

Power Plant

Data:

- Data Gathered from Homeland Infrastructure Foundation Level Data (HIFLD)

Wind Data:

- NASA Goddard Earth Science (GES) Data and Information Services Center (DISC). It provides continuous streaming of wind speed data on hourly basis for specific latitude and longitude coordinates

Airport Locations

NY:

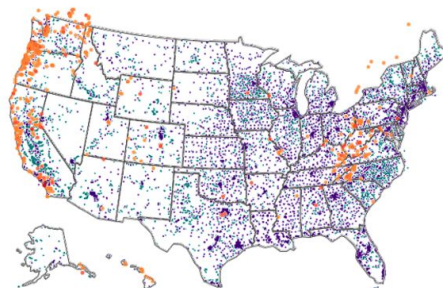

- HIFLD Open Data Center - It provides national foundation-level geospatial data for Airport Landing Facilities

Landslide Data:

- Global Gridded Landslide data from NASA : https://disc.gsfc.nasa.gov/datasets/Global_Landslide_Nowcast_1.1/summmary

Exploratory Data Analysis (EDA) & Cluster Analysis (Machine Learning)

Phase 1: July - December 2021 (Completed)

Presented the Progress/Results as Abstracts & Presentations at Fall AGU 2021

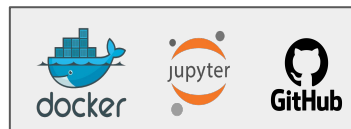

Identifying Vulnerable Healthcare Facilities Due to the Effects of Precipitation:

<https://agu.confex.com/agu/fm21/webprogrampreliminary/Paper994795.html>

A Dashboard for Identifying Flood Risks of Healthcare Facilities:

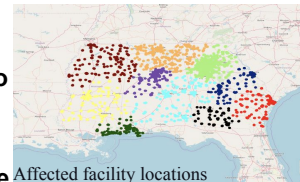

<https://agu.confex.com/agu/fm21/webprogrampreliminary/Paper992947.html>

Release Assets as Open Science

Submit Final Results to a Conference/Journal as Paper(s) & Present During ESIP Summer 2022

Integrate Existing Dashboard to Visualize Vulnerable Infrastructure

Interactive Dashboard URL:
